

Business Intelligence Tool for Silver Brook Human Resources

Flexible, Easy-to-Use Access to Human Resources Information

Drill Down to Dynamics SL Screens, Crystal Reports®, and Other Queries

Single-Click Data Export to Microsoft Excel®

Grant Access to Needed Information Without Compromising Security

HR Advanced Reporting

Enhance Silver Brook Human Resources with powerful, secure real-time ad-hoc query capabilities. HR Advanced Reporting contains everything HR users need to create custom queries without IT support.

HR Advanced Reporting allows users to access, filter, sort, format and total information in the human resources/payroll Dynamics SL database to the limit of their data permissions. Results can be exported to Microsoft Excel® with a single mouse click.

HR Advanced Reporting helps users navigate through the information in Silver Brook Human Resources and all of Dynamics SL. Queries can be launched from Human Resources screens or the menu. Users can drill down from the query results to Human Resources screens, payroll screens, other Dynamics SL screens, Crystal Reports, and other queries within HR Advanced Reporting.

HR Advanced Reporting is easy to use. Queries are organized into “books” to simplify locating the desired query. The user clicks to select a book, then clicks to select a query. The users can run the query as-is or refine it. Filters, sort criteria, formatting, totals and other features are added using intuitive, familiar interfaces. The refined query can then be saved as a personal or public template for future use.

Creating new queries is quick and easy. The query designer simply selects a predefined HR Advanced Reporting viewset. All of the tables and views are pre-joined so there is no need for IT knowledge. The user simply uses the embedded help information to select the data columns to be included in the query. The query designer may change headings, formatting, and other attributes of the data columns or accept the standard values imported from the HR Advanced Reporting dictionary.

Answers in Moments

HR Advanced Reporting is accessing the employee information and salary history tables of Silver Brook Human Resources. Filters were added to limit data based on effective date and salary unit. The result set was then sorted and totaled by pay group.

HR Advanced Reporting™

HR Advanced Reporting is secure. HR Advanced Reporting users can only access the queries in the books to which access has been granted. When a query is run the user can see only the columns of information included in that query.

Query designers can only use the viewsets for which they have been granted access rights. Hence the query designer cannot access unauthorized data or provide unauthorized data to others.

The system administrator can limit which queries a designer can modify, who can grant access rights, and other permissions.

Entire tables can be excluded from the query environment by excluding the table or view from the HR Advanced Reporting data dictionary.

Users of Silver Brook Systems' Privacy Manager can further extend security based on the values in individual data rows by embedding links to Privacy Manager permissions within the HR Advanced Reporting query.

Query Book Maintenance

Administration is simplified with HR Advanced Reporting "books." Each query is assigned to one or more books. Dynamics SL users and user groups are granted access to one or more books and all the queries contained in them.

About Silver Brook Systems

Silver Brook Systems is a Microsoft Certified Partner with ISV and Business Solution competencies. Our goal is extend the capabilities of Microsoft Dynamics SL with applications providing superior functionality.

Silver Brook Systems is intimately familiar with Microsoft Dynamics SL (Solomon) and its vast potential. A long history of system design and software development and more than 10 years experience with development specifically for Solomon enables us to provide efficient solutions to enhance the value of Microsoft Dynamics SL.
